# What is the Value of a Long-Term Database?

- ✓ Tracking the overall “health” of an ecosystem.
- ✓ Identifying problems early on (invasive species, declines in water quality, sub-optimal fishery).
- ✓ Determining how the system responds to varying weather patterns and climate change.
- ✓ Providing objective data for all stakeholders and others.
- ✓ Increases chances of obtaining financial assistance for the implementation of projects to address problems.

# ANNUAL AVERAGE SECCHI DEPTH

# Lake Tahoe, CA

- Surface area of 122,624 acres
- Hydraulic Retention Time of 700 years

# Castle Lake, CA

---

- Surface area of 47 acres
- Hydraulic retention time of about 1 year

# A High-Quality Long-Term Database

Consistency is the key.

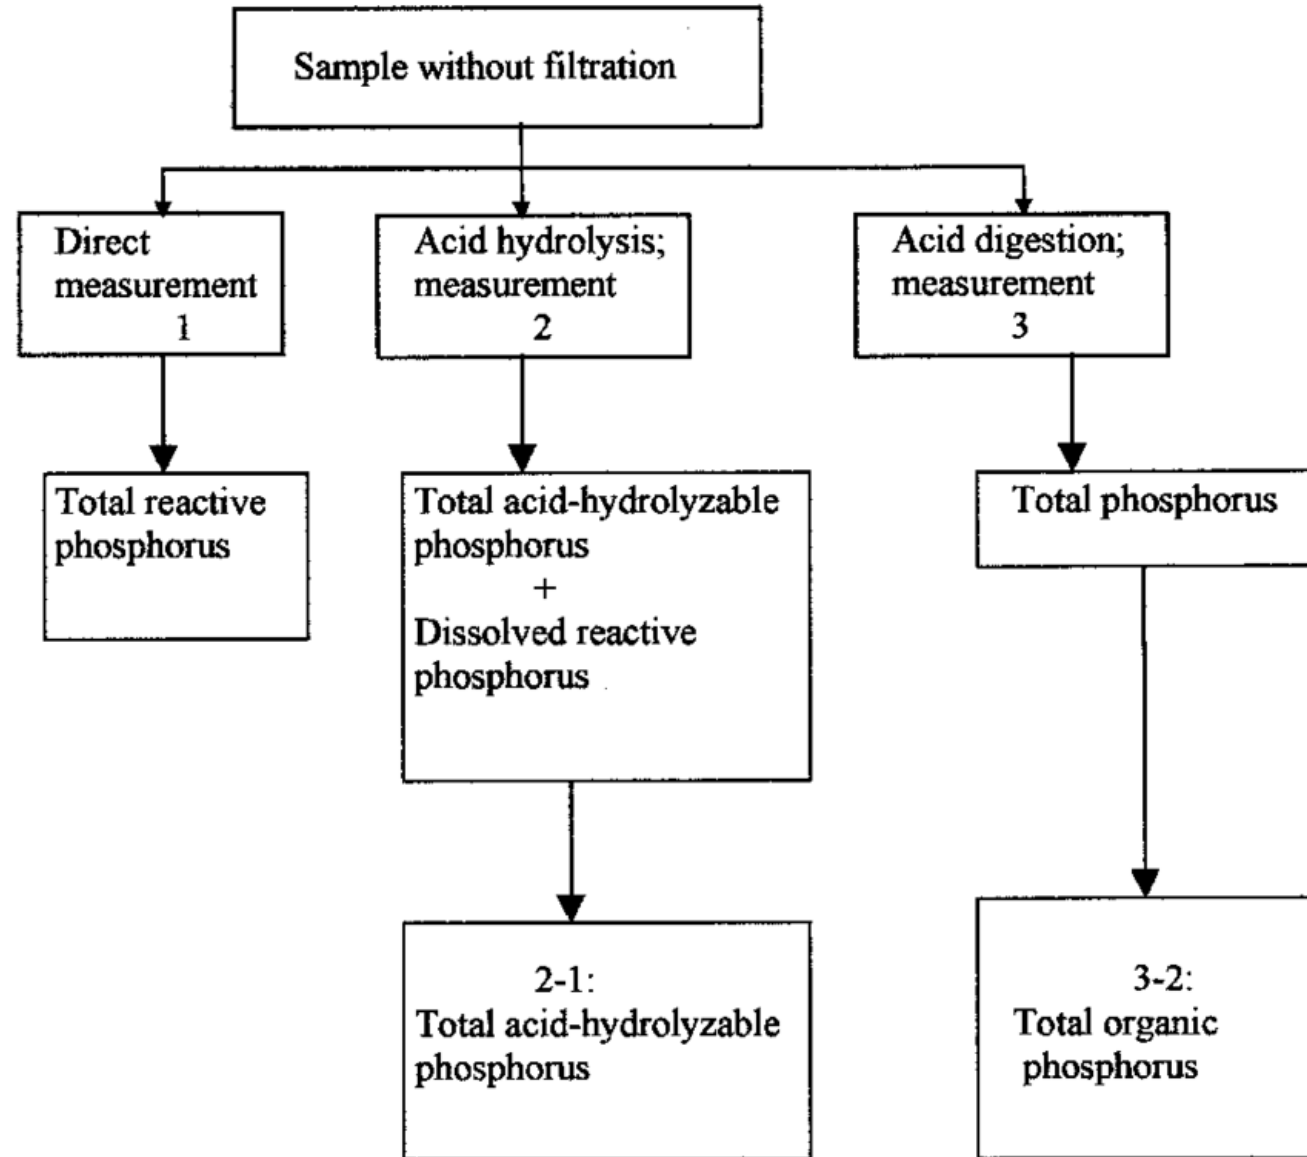

```
graph TD; A[Consistency is the key.] --> B[Have the same stations monitored (mid-lake, near the dam, at the beach or marina).]; B --> C[Sample around the same time of year; focus on the growing season.]; C --> D[Use same parameters; can add new parameters but do not replace.]; D --> E[Use same methodology; example, phosphorus];
```

Have the same stations monitored (mid-lake, near the dam, at the beach or marina).

Sample around the same time of year; focus on the growing season.

Use same parameters; can add new parameters but do not replace.

Use same methodology; example, phosphorus

## Average Annual Temperature in Northeastern US

Data Source: NOAA National Climatic Data Center

### Lake Hopatcong July Surface Temperature, Station 2

## Rainfall in June 2019 - Morris County - Boonton 1 SE Station

# Blooms at Lake Hopatcong, New Jersey (June 2019)

Mean June Total Phosphorus Concentrations (mg/L) in  
Lake Hopatcong, Sussex and Morris Counties, NJ

SCIENCE  
ENGINEERING  
DESIGN

Mean June Total Phosphorus Concentrations (mg/L) in  
Lake Hopatcong, Sussex and Morris Counties, NJ

# Annual Event Max Anoxic Zone P Loading Rate (mg P/m<sup>2</sup>/d)

# Annual Event Mean Deep TP (mg/L)

# Annual Event Mean Surface TP (mg/L)

# Annual Event Mean TSI TP, Chl, SD

● TSI TP      ▲ TSI Chl      × TSI SD  
..... Linear (TSI TP)      ..... Linear (TSI Chl)

# Correlation between TP concentrations and reported HABs

- ✓ In 2019 the mean June TP concentration was 0.043 mg/L; NJDEP conducted 40 site visits between 18<sup>th</sup> June and 29<sup>th</sup> October 2019.
- ✓ In 2020 the mean June TP concentration was 0.033 mg/L; NJDEP conducted 15 site visits between 27<sup>th</sup> May and 17<sup>th</sup> November 2020.
- ✓ In 2021 the mean June TP concentration was 0.020 mg/L; NJDEP conducted 11 site visits between 27<sup>th</sup> May and 12<sup>th</sup> October 2021.

# Harveys Lake, Luzerne County, PA

- Largest natural lake, by volume, in Pennsylvania.
- Has a TMDL for total phosphorus (TP).
- Have been implementing a variety of watershed and in-lake measures to reduce the annual TP load.
- To date, the lake is approximately 75% in compliance with it's TMDL.

Harveys Lake - Total Phosphorus Mean Trophic State Index

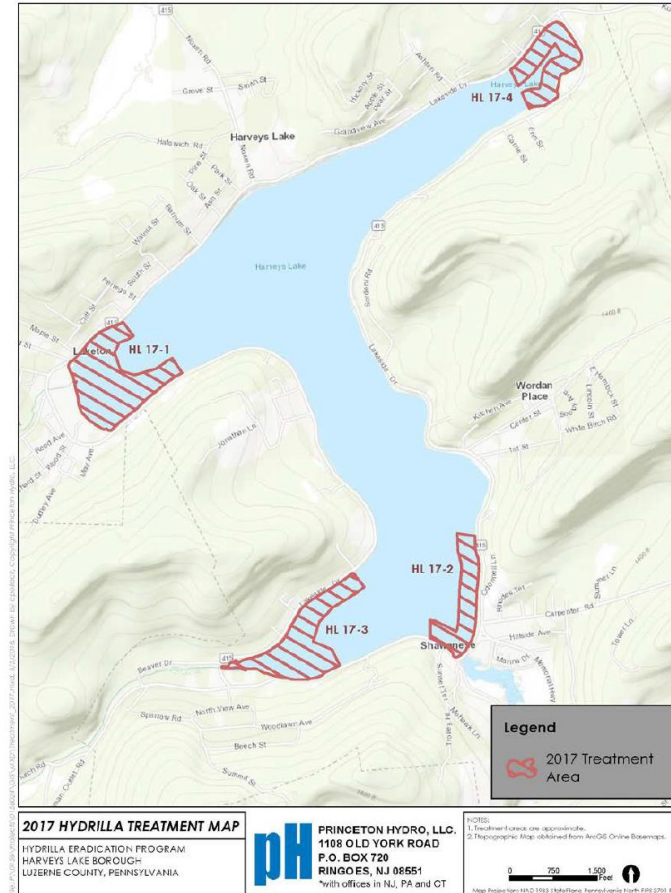

# Hydrilla found!

**July 16, 2014 –  
Hydrilla identified  
during standard  
water quality  
monitoring**

# Harveys Lake

- In 2012, no hydrilla was found in aquatic plant survey.
- In 2014, hydrilla found in 38% of the transects
- In 2016, hydrilla found in 58% of the transect
- By 2019 hydrilla was found in all 13 transects and monitoring was expanded to include more sampling points and tubers / turions.
- Using Sonar to combat the hydrilla

# Lake Mohawk, Sussex County, NJ

Lake Mohawk is a 800-acre waterbody with over 2,000 families living around the lake.

Figure 9. Carlson's Trophic State Indices for Lake Mohawk between 2010 and 2020.

# Cyanobacteria cell counts (cells/mLs)

# Cyanobacteria cell counts (cells/mLs)

# Cyanobacteria cell counts (cells/mLs)

# Cyanobacteria cell counts (cells/mLs)

# Cyanobacteria cell counts (cells/mLs)

# Lake Peekskill, Putnam County, NY

---

### Graph 1 - Lake Peekskill - Specific Conductivity

Graph 2 - Lake Peekskill - Total Phosphorus

**Graph 3 - Lake Peekskill - Chlorophyll *a***

Graph 4 - Lake Peekskill - Secchi Depth

# Summary and Conclusions

- ✓ Long-term water quality datasets provide extremely valuable insight into how lakes function and, in turn, how to effectively manage them.
- ✓ Consistency is the key in implementing a long-term monitoring program.
- ✓ Can be used in the adaptive management of a lake.
- ✓ With climate change, HABs and invasive species, long-term water quality data is particularly important in managing lakes.
